

Ants

- Sugar ants can typically be treated by using Terro. This is a safe product that can be purchased in a number of delivery methods and placed along the ant's paths. It is available at most general and hardware stores. It can take a couple of weeks before you see results. If the problem persists after several weeks using Terro notify CPM.
- There are products available for treatment of wood ants and termites. If they do not produce results notify CPM.

Spiders

- Spiders are common in and around homes. The best way to manage them is to regularly vacuum and dust. If there is an unusual infestation notify CPM.

Rodents

- Rodents are attracted to food and water. The best way to avoid getting a problem is through good housekeeping. Put garbage in sealed containers, do not stack empty food containers in the garage. Do not leave piles leaning against the house. Groom the grounds around your home (if you are responsible for yard care).
- Watch for signs of rodents (droppings, chew marks). If you notice a problem try setting traps in the areas you have seen sign. **DO NOT POISON** rodents. Poisoned rodents will die under the home or in the walls and be difficult to remove.

If a problem gets out of hand notify CPM.
