

REFRIGERATOR IS NOT WORKING

1. Make sure the breaker is correctly set again (see HOW TO RESET A BREAKER).
2. Notify CPM if the breaker does not solve the problem.
3. We will usually not be able to send a vendor to make repairs or replace appliances afterhours and on weekends. We suggest you use an ice chest or place a block of ice in the refrigerator to hold you over until we are able to make arrangements for repair or replacement of the unit.
